WE USED TO BE OPPORTUNITY-RICH . . .

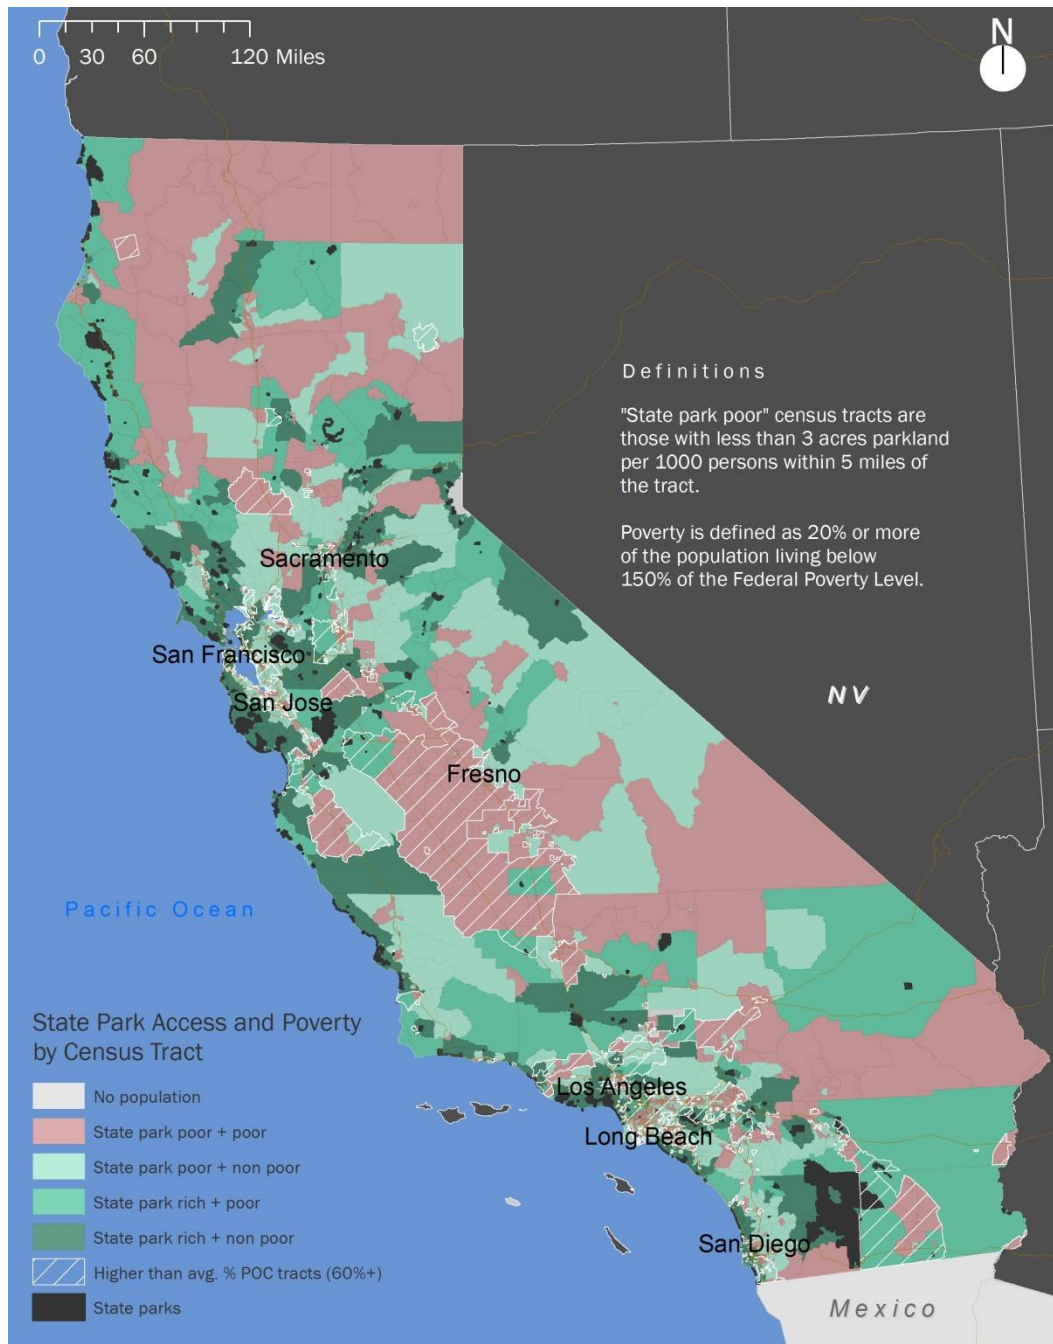

Gini Index by State
(2007-2009)

Note: The Gini coefficient is a measure of income inequality. A zero coefficient implies that all households in a state have exactly the same amount of wealth, while a coefficient of 1.0 means a single household has all the state's income.

Changing Returns to Education in California, 1979-2009

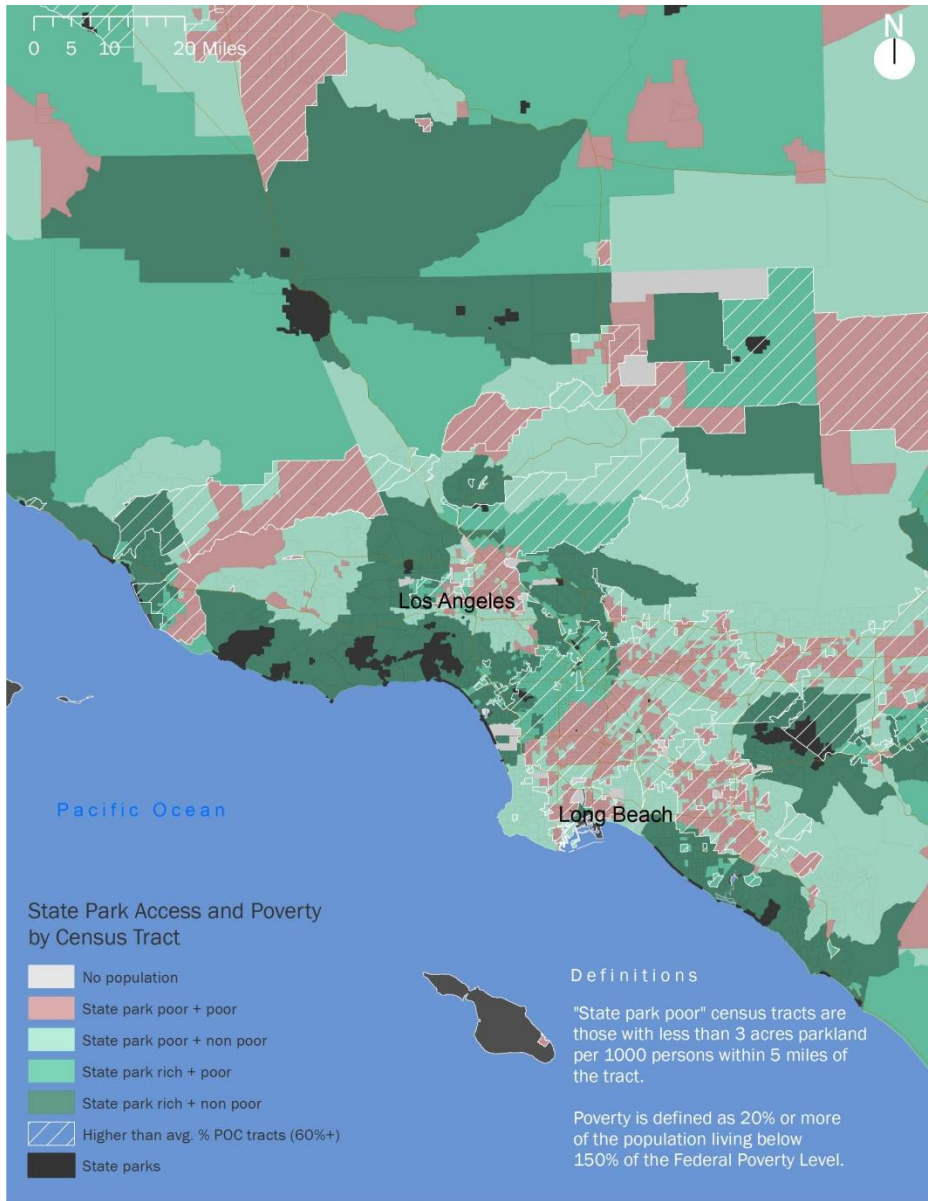

Data sources: Park data - CPAD, version 19; Demographic data - ACS, 2006-2010.

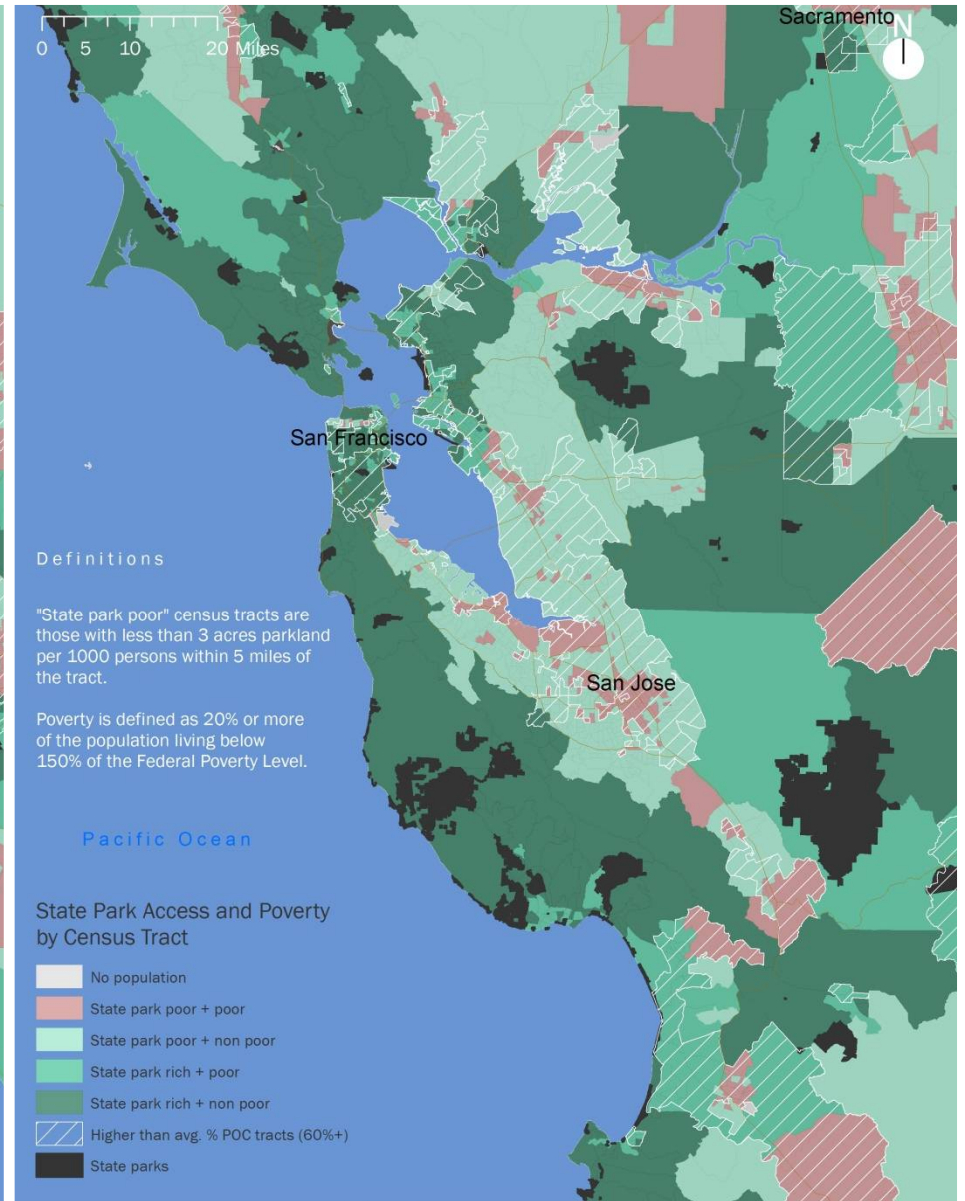

How can the state park system help with significant social challenges?

- Intersecting state park system with needs of **low-income population** and **communities of color**
- Thanks to **Greeninfo** for advice and pioneering techniques

Zoom to major urban areas

Data sources: Park data - CPAD, version 19; Demographic data - ACS, 2006-2010.

Data sources: Park data - CPAD, version 19; Demographic data - ACS, 2006-2010.

IMPLICATIONS FOR STATE PARKS

- Need to understand whether the **future demographics** are being served by park and other systems
- Need to see the park system as one part of **contributing to opportunity** for all residents
- Need to see how every system can help with **reconnecting Californians** across **generations** and **geographies**

BUILDING THE FUTURE
